

“Scientist and The Tech”

It's the story of 2050 when we were at the beginning of this advancement of technology. The new methods in every field were introducing, the term 'Human disability' vanished because of this AI technology. Before that, if anyone lost any part of the body so he couldn't get that back, but now we have this efficient technology, which can make everything happen.

Now we are probably in the most advanced era where we can travel through these time machines wherever and whenever we want in the blink of an eye but that was the time when having this kind of time machine was a Dream.

Once upon a time, there was a genius scientist of the last century who was working on the betterment of humanity. He developed many new things and served a lot to Humanity. His name was Toran, he had two sons and a brave daughter. He always used to say that his children and wife were his world. He was a renowned scientist but his financial condition was too bad because at that time the whole world was in a financial crisis. Everyone was focusing on surviving, no one couldn't do anything but Toran was a man, the man of the thought.

The meaning of Toran is “The seeker”. Toran was inspired by The Great Einstein and Stephen Hawking though both these men faced a lot of difficulties but never quit, so Toran also did this. In his late life, he dedicatedly worked on making the time machine's dream into reality. In making he passed through many phases but dangerous was losing his son and a daughter to death.

When his work on the time machine was in the last process, he completed the theoretical part and also presented it to every institution but his fate was not good at that time. He couldn't get any funds from anyone because of the crisis. He was going to every state of the country but couldn't succeed. One day he brought his family to Scotland. He went to the cake shop to buy the present for the director of the PIST (Pakistan Institute of Science and Technology) because he had a meeting with him about the funds for his work. His elder son was fond of cakes. The cake shop was the biggest in Scotland and had cakes of unique designs so his sons were wandering in the shop and Toran was in a hurry because they reached late because of bad weather. He forgot his sons in the shop and thought that they were with his mother. When he came

back to the shop, his sons were not there. After a lot of struggle and with the help of the police finally, he got his sons.

The most tragic part happened in the completion of the time machine when he was testing the parts of the machine with his daughter, who was also the youngest scientist and got so many international awards. His daughter Eily got into an accident and admitted almost 45 days in the hospital but never recovered and died. Eily's death was caused by the first copy transformers that had technical faults and the manufacturers were illegally manufacturing them. After Eily's funeral, Toran investigated and found this. He promised himself to kill the owner of that company or made them to court. He was planning drastically and in the process, he left the time machine behind. But when the manager of PIST asked him to complete the test so he had no other option so he did.

After a lot of hard work, He finally developed the Time Machine and the machine passed every test. Both Toran and Eily were awarded the Nobel prize in physics and Toran got the words with his name "Scientist Of The Century".

After presenting his work to the world he filed the petition against manufacturers that were his colleagues at a young age, his case took less time because he had gathered strong evidence and also became the laureate. The case continued for 2 months. After that, the court announced the life sentence and sent the culprits to jail along with the heavy fine. He was waiting for this time and time had come. Eily's murderers are now in jail and she becomes immortal because of her work with his genius dad.

The main important thing was the time. If Toran didn't complete his work so his daughter's dream was also in vain and probably the culprits weren't in jail because after winning the Nobel prize he had the eyeballs of all the world which helped him in the case a lot before this he hadn't. Time showed the results to the world. The sacrifice that he gave and his dedication to work in the field of science to develop something new that can transform the world.

"Time is not the enemy, neither the friend, Time is the weapon"

-Muhammad Amas
