This is the same as multiplying x by 2**y.</p> <p><b>x &gt;&gt; y</b> Returns x with the bits shifted to the right by y places. This is the same as //ing x by 2**y.</p> <p><b>x &amp; y</b> Does a "bitwise and". Each bit of the output is 1 if the corresponding bit of x AND of y is 1, otherwise it's 0.</p>	<ol style="list-style-type: none"> <li>1. What kind of tasks cannot be done with highlevel languages?</li> <li>2. Abbrevation (BIOS, ISR, POST)</li> <li>3. What is Interrupt Service routine?</li> </ol>	
---	--	--	---	--

**$x | y$**

Does a "bitwise or". Each bit of the output is 0 if the corresponding bit of  $x$  AND of  $y$  is 0, otherwise it's 1.

**$\sim x$**

Returns the complement of  $x$  - the number you get by switching each 1 for a 0 and each 0 for a 1. This is the same as  $-x - 1$ .

**$x \wedge y$**

Does a "bitwise exclusive or". Each bit of the output is the same as the corresponding bit in  $x$  if that bit in  $y$  is 0, and it's the complement of the bit in  $x$  if that bit in  $y$  is 1.

Notice that bit-length, which is the number of binary digits, varies greatly across the characters. The euro sign (€) requires fourteen bits, while the rest of the characters can comfortably fit on seven bits.

Note: Here's how you can check the bit-length of any integer number in Python:

```
>>>
```

```
>>> (42).bit_length()
```

		<pre>6 Without a pair of parentheses around the number, it would be treated as a floating-point literal with a decimal point.  &gt;&gt;&gt; for char in "Euro": ...     print(char, len(char.encode("utf-8")) )) ... € 3 u 1 r 1 o 1  def xor(a, b):     return (a and not b) or (not a and b)</pre>		
4	<ol style="list-style-type: none"> <li>1. Tree Traversing methods - In-Order, Pre-Order and Post-Order</li> <li>2. Binary Search Tree v/s Binary Tree v/s Tree</li> <li>3. Data compression using Huffman Algorithm as Applications of Binary Tree</li> </ol>			

	4. Stack data structure - Push, Pop 5. Applications of Stack Data Structure - verify all opening brackets in an expression have also their matching closing brackets, Palindrome, Infix to Postfix Conversion			

## -----Session 1: (06-Sep-2021)-----

### Learning Objectives

### Lecture Summary Points

**Exam Questions**

**Lab Discussion**

**Lab tasks/Coding questions**

-----Session 2: (13-Sep-2021)-----

**Learning Objectives**

**Lecture Summary Points**

- Malloc function
- Low level and high level features in C lang language
- Some of the things that we can't do from high level languages like OS development, device drivers etc.
- Interrupts of OS

1. Interrupt service routine( main defination, detail).
2. Interrupt no. 5 and its function.

- Firmware

1. What is firmware.
2. Power on Self test.
3. BIOS interrupt.
4. C lang can access firmware functions.

- Shadow ROM

- What happens when files are deleted. How deleted files are saved in directory file. We can access to hard disk by C language.
- Difference in primary and secondary storage

## Exam Questions

- 4.

## Lab Discussion

- Recursion

1. Step by Step execution
2. Factorial program by recursion.
3. Power program by recursion.

- Binary Search Tree

1. What is root node
2. How to make binary tree

3. How to search number from it
  4. Leaf nodes/ child nodes/ parent nodes
  5. Types of Sub Tree
- Hints to make Binary Search program in python language.

## Lab tasks/Coding questions

# -----Session 3: (20-Sep-2021)-----

## Learning Objectives

## Lecture Summary Points

- Binary Search Tree
  1. Diagramatic structure
  2. How to search number in binary search tree
- Tree Traversing methods
  1. In order
  2. Pre Order
  3. Post order
- Difference in Tree / Binary Tree / Binary Search Tree
- Structure of Expression Tree
- Application of Trees
- Hauffman Tree:
  - How to make it,

Its advantage,  
How to traverse it and set binary for characters,  
How it works

- Encoding scheme (definition)
- ASCII encoding scheme (Basic)

## Exam Questions

- Insert given numbers into binary search tree and create its tabular structure in same sequence.
- Write a program to find leaf node
- Traversing of tree
- What is Difference in Tree / Binary Tree / Binary Search Tree?
- How is data traverse in In-order traversal? What is unique in it?

## Lab Discussion

- How to calculate frequency of characters in a file
- Ord() Function

## Lab tasks/Coding questions

- Write a program to calculate frequency of characters in a text file
- Home task:
  - Matrix program(Addition, subtraction, multiplication)
  - Gauss Jordan method program
